

UniBasic IQ

POWERFUL

UniBasic-IQ is the most powerful report writer and ad-hoc query tool for accessing your UniBasic database. Designed from a user's perspective, UniBasic-IQ allows users to generate reports and queries from a "point and shoot" graphical interface using simple English fieldnames.

FLEXIBLE

Custom reports can be created in minutes, even displayed as a graph or chart. Managers can create "what if" reports and inquiries to help make tough decisions easier and increase their effectiveness. Using UniBasic-IQ, users can export information from their database into other popular database and spreadsheet programs, such as Lotus 1-2-3, for further analysis.

SAFE

Best of all, users never have to worry about the integrity of their data. UniBasic-IQ operates in a "read-only" mode so files are never compromised. Users are free to create any type of query or report without fear of corrupting their database, no matter how many users are accessing the files.

EFFICIENT

As for developers, you will discover that by adding UniBasic-IQ to your applications, development productivity increases. Using UniBasic-IQ can significantly reduce the time your programming staff needs to create production reports. Such reports can be easily integrated into your application's menus without launching an interactive UniBasic-IQ session.

General Features

- On-line help screens
- Stored reports run by a batch file or executed by a user
- Parameter passing to modify stored reports

Outputting

- A wide variety of output types available on the screen, to disk, or to a printer
- Columnar output with detail, detail with subtotals, subtotals only, and grand totals
- A true WYSIWIG Report Painter allows users to create custom freeform reports and labels complete with headings, sub headings, detail, subtotals, grand total, page footers and unlimited subtotal breaks
- Outputs in x-y graphs or histograms with automatic or user defined bars, legends and titles
- Automatic reformatting of data for other database and spreadsheet applications

Sorting

- Numeric, character, and date sequencing
- Ascending and descending by field
- Unlimited number of sort fields

Manipulating

- Operations: add, subtract, multiply, divide, move
- Conditional IF-THEN-ELSE logic
- User specified scaling of result fields
- Date math (add, subtract)
- Substring, Concatenate, Prompt, Move, and initialize commands to create temporary fields

Searching

- All comparison operators: equal, not equal, less, greater, less or equal, greater or equal, range, multiple values
- Numeric, character and date comparisons
- Unlimited levels of selection conditions can be combined with AND/OR using parenthesis
- Wildcard selection: Begins with/ends with/contains
