

# UniBasic

## VALUE

---

Today's business depends on more than just the best price. Value is the key to success. UniBasic combines the two into a state-of-the-art Business BASIC language for serious application developers and users who are looking for the best return on their data processing investment.

## POWER

---

BASIC has always been a worldwide popular language for the creation of performance-driven business applications. UNIX has long been the operating system of choice for multi-user systems. UniBasic combines these advantages to create a powerful environment for the growth and success of your business.

## CHOICE

---

UniBasic's compliancy with industry-standards gives developers and users the ability to choose their functional requirements and system configurations from a variety of options. Whether your need lies in small business solutions or large installations of 1,000 or more users, UniBasic gives you the scalability to fit into any environment.

## GROWTH

---

UniBasic's agility allows you to integrate 3rd party software easily into your applications. You may choose from any number of options such as word processors, spreadsheets, fax servers, and DCI's own Intelligent Report Writer/Query tool -- UniBasic-IQ.

## PROFIT
