## PASSPORT™ SECURITY REVISITED

**P**assport™ Security is a separate product that is no longer bundled with UniBasic 5.4, UniBasic-NexGen 1.x or UniBasic-IQ Version 3.x.

All orders for latest product versions will include separate installation media for Passport. If you are downloading new product revisions, remember to download Passport, too.

The recommended installation procedure for multiple DCI products is: #1, UniBasic or NexGen language product; #2, UniBasic-IQ product; and #3, Passport Security 3.x product.

Use caution when installing newer versions of products on systems where older versions of other products reside. To avoid conflicts, be sure to install Passport Security 3.x last.

For more information on the emergence of Passport as a separate product, refer back to DCI's March 1995 Tech Brief. We'll be glad to send you another copy of the March Tech Brief, if needed.

*Free!*

All licensed DCI Resellers will receive a **FREE** copy of the new *Passport User's Guide*. For additional copies, please contact DCI or your distributor.

Use caution when mixing versions of products. To avoid conflicts, be sure to install Passport Security 3.x last.
