ELECTRONIC UPDATE

Dynamic Concepts has just completed an upgrade of our in-house dial-in modems to provide transfer rates up to 28.8 bps. The new modems are *Motorola Power 28.8* and support V34 protocol. They are also able to communicate with modems designed to run at lower speeds, such as 14.4, 9600, etc.

The new modems facilitate faster transfer rates and better error recovery when downloading software from our distribution system. In addition, they will answer incoming dial-up session requests. Please let us know if you experience any problems with the new system. The DCI modem number is (714) 448-5299.

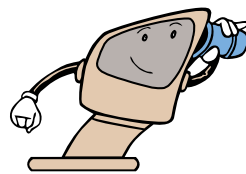

Even though our modems are capable of 28.8 bps transfer rates, the A/D converter on our digital phone system limits most connections to somewhere between 19.2 and 26.8. We are working with the phone company to resolve this problem.

DCI has a Class C Internet address with the domain name **dynamic.com**. You may address e-mail to anyone at DCI as follows: firstinitiallastname@dynamic.com. Additionally, you may use the mailboxes: sales@dynamic.com and support@dynamic.com.

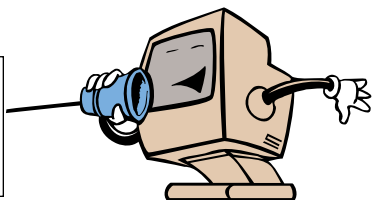

Last month, DCI announced plans for a full-time Internet presence in 1996. Virtually all participants at the DCI Reseller Conference committed to obtaining e-mail addresses.

Once DCI is connected full-time, resellers will be able to download software at even higher transfer rates for the price of a local call to an Internet provider.

DCI is compiling a list of all clients with e-mail capability to facilitate the distribution of technical information in a more timely manner, as well as gauge interest and accessibility to DCI's planned full-time Internet presence.

Please send us e-mail addresses of people in your organization.
