Building INDEX Files on Solaris SPARC

UniBasic 5.3.2 and 5.4

The DCI Support Team has learned that users of UniBasic revisions 5.3.2 and 5.4 on Solaris SPARC cannot build INDEX files if the user's UID is greater than 65535. The BUILDXF utility program, which creates Indexed files, also fails.

Workaround Ready

The interim workaround for this problem is to use UIDs of less or equal to 65535. UniBasic users on Solaris SPARC will be notified about a new release upon availability.

Solution Sought

Meanwhile, a permanent solution to the problem is being developed. Users will be notified as to how and when they can expect the solution.

Thank you for your cooperation.
